Overview of COVID-19 Surveillance

This report is updated daily at approximately 1:00 p.m. Information on COVID-19 cases changes rapidly, and this report may not reflect updates made after 1:00 p.m. by local health departments or health care systems.

Report Date: May 05, 2020

5449 Total COVID-19 Cases

126715 Total Reported People Tested

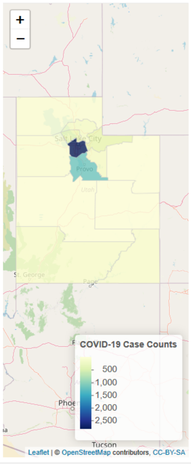
456 Total COVID-19 Hospitalizations

56 Total COVID-19 Deaths

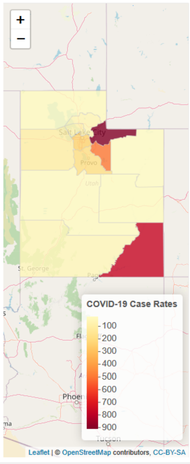
Total Number of Lab-Confirmed COVID-19 Cases in Utah

Jurisdiction	Cases	Hospitalizations	Deaths
Bear River	62	10	1
Central Utah	25	2	0
Davis County	302	25	2
Salt Lake County	2832	261	35
San Juan	119	12	2
Southeast Utah	12	0	0
Southwest Utah	121	13	3
Summit County	382	33	0
Tooele County	70	6	0
TriCounty	14	1	0
Utah County	1171	63	10
Wasatch County	166	7	1
Weber-Morgan	173	23	2
State Total	5449	456	56

COVID-19 Case Counts



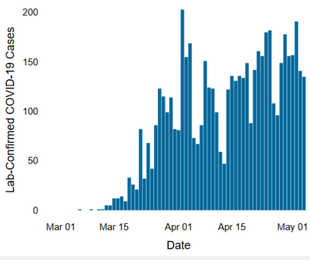
COVID-19 Case Rates per 100,000 Population



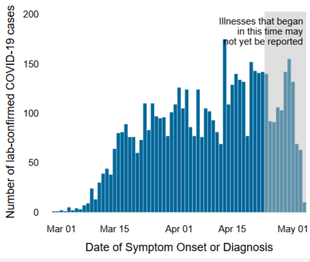
Cases Reported by Indian Health Service and Tribal Nations (these cases are also reflected in case counts by health district)

Reporting Jurisdiction	Cases
Navajo Nation Reservation (Utah) - Utah Navajo Health System	116
Uintah and Ouray Reservation: Uintah & Ouray Indian Health Services (IHS)	0
State Total	5449

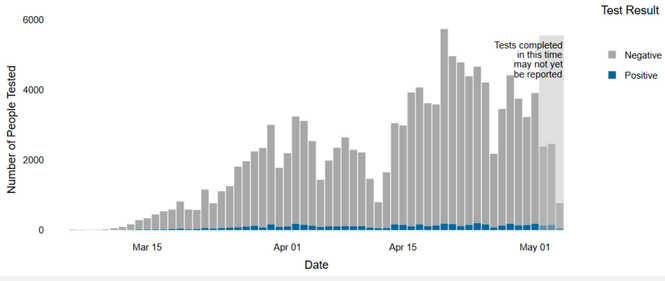
COVID-19 Cases by the Date a Positive Test was Reported to Public Health



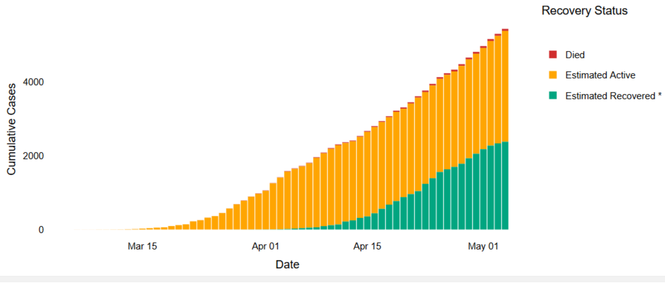
COVID-19 Cases by Date of Symptom Onset or Diagnosis (data will backfill)



Number of People Tested by Date



Cumulative COVID-19 Cases with Estimated Recoveries * (does not include the current day)



Data Notes:

* The number of recovered persons is estimated by the number of cases whose first positive laboratory test was reported at least 21 days ago, excluding deaths.

Laboratory: As of March 19th, 2020 all major private and public laboratories in Utah are reporting positive and negative COVID-19 (SARS-CoV-2) results to UDOH, positive cases are reported immediately. Negative results may have up to a 72-hour lag before being reported and results prior to March 19th may be under-reported. Laboratory positives may not match confirmed cases due to ongoing investigations and confirmatory testing. When available, laboratory data is shown by the date a sample was tested. If unavailable, it is shown by the date reported to public health.

Case data: As of 4/15, case data are displayed by both the date the first positive laboratory result (FPLR) is reported to public health and the self-reported symptom onset date. Previously this was reported by the first day a person was reported (through laboratory results or contact tracing) to public health. The FPLR date will provide a more stable estimate of the new cases reported to public health, however, there will be small differences in cases by date as public health receives additional information. Onset date is taken preferentially from the following dates when available: 1) self-reported date of first symptoms, 2) date diagnosed by a clinician, 3) date first positive specimen was collected, 4) first report to public health. The actual number of cases in Utah is higher than what is reported due to mild cases not feeling ill enough to seek care, clinician judgement for testing, and expanding laboratory capacity.
